## Contract Specifications

Deposits and withdrawals not made in US Dollars will be exchanged to/from US dollars according to bank check exchange rates. When the client withdraws funds, it is the Company's standard practice to send the money back to the client in the same currency the money was originally deposited.

### Trading Conditions Overview for EuropeFX MT4 Users

Europe FX' high-speed execution and advanced trading environment puts all the right tools at your disposal enabling you to take advantage of opportunities to maximize your trading potential on the energy commodities, equity indices, precious metals and Forex currency trading markets.

Features	Forex	CFD Spot Metals	CFD Futures	Shares	Cryptocurrencies
<b>Leverage</b>	Up to 1:30	Up to 1:20	Up to 1:20	Up to 1:5	1:1
<b>Minimum Spread</b>	Raw Spread	Raw Spread	Raw Spread	Raw Spread	Raw Spread
<b>Minimum trade size</b>	0.01lot	0.01 lot	0.01 lot - 0.1 lot*	0.01 lot - 0.1 lot*	0.01 lot
<b>Commission</b>	Commission is charged as fixed amount or as a percentage of underlying asset price. <b>Formula for Commission in Percentage = Asset price * Commission * Volume</b> Example: Suppose Amazon share price is 1850.50 and you want to trade 0.1 lot with commission 7% Commission paid = $1850.50 * 7\% * 0.1 = 12.95\$$				
<b>Minimum Initial Deposit</b>	200 USD or EUR or GBP equivalent				
<b>Payment Methods</b>	Bank Wire. Credit/Debit Cards				
<b>Trading Platforms Available</b>	Meta Trader 4, TradeWorks, EuroTrader, eFXGO!				
<b>Additional Information</b>	Limit and Stop Levels are not guaranteed.				
<b>Platform Operating Times</b>	24h from Monday to Saturday**				
<b>Dedicated Live Support</b>	Customer support available 5 days a week.				

<b>Market-leading prices with fractional pricing</b>	We monitor the market throughout the day to ensure you can access the tight spreads. Prices are quoted to the fifth decimal point allowing you to profit from small price movements.
<b>Flexible leverage options</b>	You can choose the leverage level that suits your trading style and risk appetite putting you in a position to take advantage of market movements as you choose.
<b>Rapid execution and comprehensive trading tools</b>	EuropeFX offers secure systems to execute your trades.
<b>Account currency</b>	USD, EUR, GBP
<b>Trade the lot size you want</b>	Whether you're a beginner or seasoned trader you can choose the lot size to suit your strategy from a minimum of 0.01 lots.
<b>EAs and HFT (High Frequency Trading)</b>	Whatever is your trading style you can execute your strategy on any Instrument with EuropeFx. Meta Trader 4 is compatible with Expert Advisors and automated trading systems as allowed by the prevailing market conditions and liquidity.

\*0.1 lot refers to CFD trading future contracts on Indices

\*\* Timings may change based on market conditions

## ONLINE TRADING FOR EUROPE FX MT4 USER

### *Competitive Pricing and spreads*

Europe FX is proud to offer competitive spreads on all currency pairs. On the major pairs as the EUR/USD, GBP/USD and USD/JPY, spreads start at 0.1 pips.

### *Trading Hours*

All instruments are available for trading during the trading hours.

### *Order Size*

Minimum order size is 0.1 Lot. The number of contracts depends upon the settings of the underlying asset. Please see the table below for details.

## Order Types

### **There are 2 major types of orders:**

#### **1. Market Order**

Market order is a request to buy or sell a security at the current market price. Execution of this order results in opening of a trade position. Securities are bought at ASK price and sold at BID price. Stop Loss and Take Profit orders (described below) can be set for market orders.

#### **2. Pending Orders**

Pending order is the client's request to buy or sell a security at a pre-defined price in the future. This type of orders is used for opening of a trade position provided the future quotes reach the pre-defined level. There are four types of pending orders available in the terminal:

- **Buy Limit** – buy provided the future "ASK" price is equal to the pre-defined value. The current price level is higher than the value of the placed order. Orders of this type are usually placed in anticipation of that the security price, having fallen to a certain level, will increase.
- **Buy Stop** – buy provided the future "ASK" price is equal to the pre-defined value. The current price level is lower than the value of the placed order. Orders of this type are usually placed in anticipation of that the security price, having reached a certain level, will keep on increasing.
- **Sell Limit** – sell provided the future "BID" price is equal to the pre-defined value. The current price level is lower than the value of the placed order. Orders of this type are usually placed in anticipation of that the security price, having increased to a certain level, will fall.
- **Sell Stop** – sell provided the future "BID" price is equal to the pre-defined value. The current price level is higher than the value of the placed order. Orders of this type are usually placed in anticipation of that the security price, having reached a certain level, will keep on falling.

Stop Loss and Take Profit can be set on pending order. After a pending order has triggered, its Stop Loss and Take Profit levels will be automatically set to the open position.

#### **3. Stop Loss**

This order is used for minimizing of losses if the security price has started to move in an unprofitable direction. If the security price reaches this level, the position will be closed automatically. Such orders are always connected to an open position or a pending order. The brokerage company can place them only together with a market or a pending order. Trading terminal checks long positions with BID price for meeting of Stop loss (stop loss is always set below the current BID price), and it does with ASK price for short positions (stop loss is always set above the current ASK price). To automate Stop Loss order following the price, one can use Trailing Stop.

#### 4. Take Profit

Take Profit order is intended for gaining the profit when the security price has reached a certain level. Execution of this order results in closing of the position. It is always connected to an open position or a pending order. The order can be requested only together with a market or a pending order. Trading terminal checks long positions with BID price for meeting of this Take Profit (Take Profit is always set above the current BID price), and it does with ASK price for short positions (Take Profit is always set below the current ASK price).

##### Kindly note:

- Stop Loss and Take Profit orders can only be executed for an open position, but not for pending orders;
- Charts are drawn only for BID prices in the terminal. At that, a part of orders shown in charts is drawn for ASK prices. To enable displaying of the latest bar ASK price, one must flag the "Show Ask line" in the terminal settings.

##### *Trailing Stop*

Stop Loss is intended for reducing of losses where the symbol price moves in an unprofitable direction. If the position becomes profitable, Stop Loss can be manually shifted to a break-even level. To automate this process, Trailing Stop was created. This tool is especially useful when price changes strongly in the same direction or when it is impossible to watch the market continuously for some reason.

Trailing Stop is always attached to an open position and works in client terminal, not at the server like Stop Loss, for example. To set the trailing stop, one must execute the open position context menu command of the same name in the "Terminal" window. Then one must select the desirable value of distance between the Stop Loss level and the current price in the list opened. Only one trailing stop can be set for each open position.

After the above actions have been performed, at incoming of new quotes, the terminal checks whether the open position is profitable. As soon as profit in points becomes equal to or higher than the specified level, command to place the Stop Loss order will be given automatically. The order level is set at the specified distance from the current price. Further, if price changes in the more profitable direction, trailing stop will make the Stop Loss level follow the price automatically, but if profitability of the position falls, the order will not be modified anymore. Thus, the profit of the trade position is fixed automatically.

- Trailing Stop works in the client terminal, not in the server (like Stop Loss or Take Profit). Therefore, it will not work, unlike the above orders, if the terminal is off. In this case, only the Stop Loss level will trigger that has been set by trailing stop.
- Trailing Stop is processed once per tick. If multiple orders with Trailing Stop are open for one symbol, only the trailing stop of the latest open order is processed.

### Swap/Rollover

If a trade is kept open overnight, then there is a swap/rollover fee calculated on that position. It is calculated as the overnight interest rate differential between the two currencies on which the position is held, depending on the type of the position (long/short).

It is important to remember that one can gain or lose on swap and as such, one has either positive rollover or negative rollover. There is a possibility that some instruments may have negative rollover values on both sides therefore, the positive and negative values are decreased accordingly.

In the trading terminal 'swap' is automatically converted into the balance currency. Operation is conducted between 20:30 – 00:00 GMT. Triple swap is charged on Wednesdays.

Swap maybe be charged in points or percentage

Percentage Swap calculation formula:

Forex Only =  $(\text{Contract Size} * \text{Lot Size} * \text{Swap rate} / 100) / 360$

All instruments except Forex =  $(\text{Contract Size} * \text{Lot Size} * \text{Market price} * \text{Swap rate} / 100) / 360$

### Margin Requirement / Leverage

Margin requirement for CFDs depends on the leverage applied to the trading account and can be calculated using the following formula:

Forex instruments =  $\text{Lots} * \text{Contract size} / \text{Leverage}$

All instruments except forex =  $\text{Lots} * \text{Contract size} * \text{Instruments price} / \text{Leverage}$

The default leverage for retail clients has been set to 1:30. Professional clients can request for higher leverage.

### Margin Call

It occurs when the funds in trading account cannot cover the possible loss from open trades. It happens when equity falls below used margin. Our Margin Call occurs when the margin level of the account is less than or equal to 70%.

### Stop out

At this point, one or all of the trader's active trades are closed automatically, starting from the least profitable trades, because the accounts margin level has dropped to a point where it can no longer support loss from open trades. Our Stop out occurs when the margin level of the account is less than or equal to 50%.

Margin level formula:  $\text{Equity} / \text{Margin used} * 100$

### Swap Discount Groups

Swap Discount
25%
50%
75%

#### Note:

- In case a client is on Commission Discount Group, he/she will automatically be on zero discount on Swaps.
- Every change in Swap Group will expire in 14 Calendar Days.

### Commission Discount Groups

Account	Commission Discount	Net Deposit
Bronze	0%	1000
Silver	10%	2500
Gold	25%	10,000
Platinum	50%	25,000
Premium	25%	50,000
Diamond	10%	200,000 – 500,000
Elite	25%	500,000 – 1,000,000
Prestige	50%	Above 1,000,000

### Swap and Commissions Discount Groups

Swap & Commission Discount	Min Deposit
25%	250,000
50%	500,000
75%	1,000,000

**NOTE:**

- On Cryptocurrencies the commission charged is calculated in percentage of market value of the traded lot size.
- Raw Spread variable reflect lowest existing spread coming directly from the market which may vary depending on underlying market conditions. The company cannot guarantee 0.1 spread due to different market conditions which might affect the spread for each product. Clients are advised to check spread before trading.
- Trading hours might change without prior notice. EuropeFX cannot be held liable for any market hours changes. Clients are suggested to check trading hours from MT4 trading platform.
- Europe FX has the right to amend the above spreads according to market conditions as per 'Terms and Conditions'.
- The commission fee per 1 lot for all the above financial products (excluding Cryptocurrencies) is calculated on the opening.
- CFD's on Equities trading - Financing fee: An Overnight daily margin interest fee of 0.35% is applied on client's CFD's on equities opened trades.
- Cryptocurrencies – The commission is charged in percentage of the market value of the traded lot size.
- Kindly note that some of the provisions of the contract specifications might change.
- You are hereby requested to check your agreements with the Company and your trading terminal before placing orders.
- Clients referred to the Company by a Referring Broker/Introducing Broker acknowledge and agree to the fact that the Introducing Broker/Referring Broker may receive a portion of the trading commission charged in their account(s). All details shall be disclosed upon request.
- Different Fees associated with institutional/corporate/omnibus accounts might be applied. For more information, please refer to the Company's Representatives.

**Country Regulatory Requirements Notification:** Europe FX may not accept some customers applying for trading accounts in certain countries due to local regulatory requirements including but not limited to citizens of the United States, Canada etc.

**Risk Warning:** The company offers to its Clients the option to trade in Cryptocurrencies (might be referred to also as Virtual Currencies). The company would like to warn and draw the attention to Clients that wish to trade CFD on Cryptocurrencies the following:

There is no specific EU regulatory framework governing the trading in such products;

Trading in Virtual Currencies is not covered by MiFID II and therefore falls outside the scope of the company's MiFID II regulated activities;

Virtual currencies are complex and high risk and as such come with a high risk of losing all the invested capital;

Virtual currencies values can widely fluctuate (high volatility) and may result in significant loss over a short period of time;

Virtual currencies are not appropriate for all investors and therefore, investors should not trade in such products if they don't have the necessary knowledge and expertise in this specific product and they should always be fully aware and understand the specific characteristics and risks related to these products;

Trading in Virtual currencies does not entitle the investors to any protection under the Investors Compensation Fund; Clients have no rights to report to the Cyprus Financial Ombudsman in case of a dispute with the company.
